

WEB-200 (OSWA) Foundational Web Application Assessments

Summary:

Learners tackle the challenges of web vulnerabilities head-on. This comprehensive course covers detection and exploitation of web threats, safeguarding application data. This helps organizations enhance their web defenses against emerging threats. Those who pass the exam receive the OSWA certification.

Great For:

- Software Developers
- Exploitation Analysts
- Vulnerability Assessment Analysts
- Cyber Defense Analysts
- Information Systems Security Developers
- Secure Software Assessors

Learn:

- Cross-site Scripting (XSS)
- SQL Injection (SQLI)
- Server-side Template Injection (SSTI)
- XML External Entity Injection (XXE)
- Server-side Request Forgery (SSRF)

Benefits:

- **Improved Security Posture:** By learning to exploit web vulnerabilities and exfiltrate data, learners can identify before they're exploited, protecting valuable data, maintaining customer trust, and safeguarding the organization's reputation.
- **Investment in Human Capital/Employee Retention:** Invest in your best and brightest with advanced training opportunities. Stronger cybersecurity protections and a happier team is a win/win
- **Organizational Efficiency:** The practical experience with private exercise machines and custom web apps translates into more efficient and effective cybersecurity practices.
- **Regulatory Compliance:** Avoid potential fines and penalties and maintain a positive reputation by exceeding regulatory requirements.
- **Risk Mitigation:** Identify and exploit common web application vulnerabilities, helping your organization proactively address potential security threats, thereby reducing the risk of costly breaches.
